

Thinking Outside The Box

Moving And Storage For Items That Don't Fit Into A Box

Disassemble Items and Tape or Tie The Components Together

Bed frames, desks, tables can often be disassembled and the parts taped or tied together. This makes transport easier and allows the components to be stacked more efficiently.

How to Pack Furniture

Be careful using tape on furniture. The glue from the tape can be very difficult to remove from furniture. Plastic can cause damage because it restricts the airflow, which is important for natural fibers and wood for example. Proper furniture pads protect the furniture during transport and while in storage alleviating the problems caused by plastic and tape.

Packing Tools and Equipment

Garden tools, power tools and other items with “engines” need to have the fuel drained prior to storage. It’s also a good idea to clean them and lubricate moving parts prior to storage.

Determine the Best Size Unit

Our specialty is matching the exact size you to your specific needs. Many self storage facilities simply sell you their empty units instead of the best size unit to fit your needs. We don’t do that. Our network of facilities throughout Westchester County enables us to provide the best size unit for you.

Climate Controlled Unit or Not

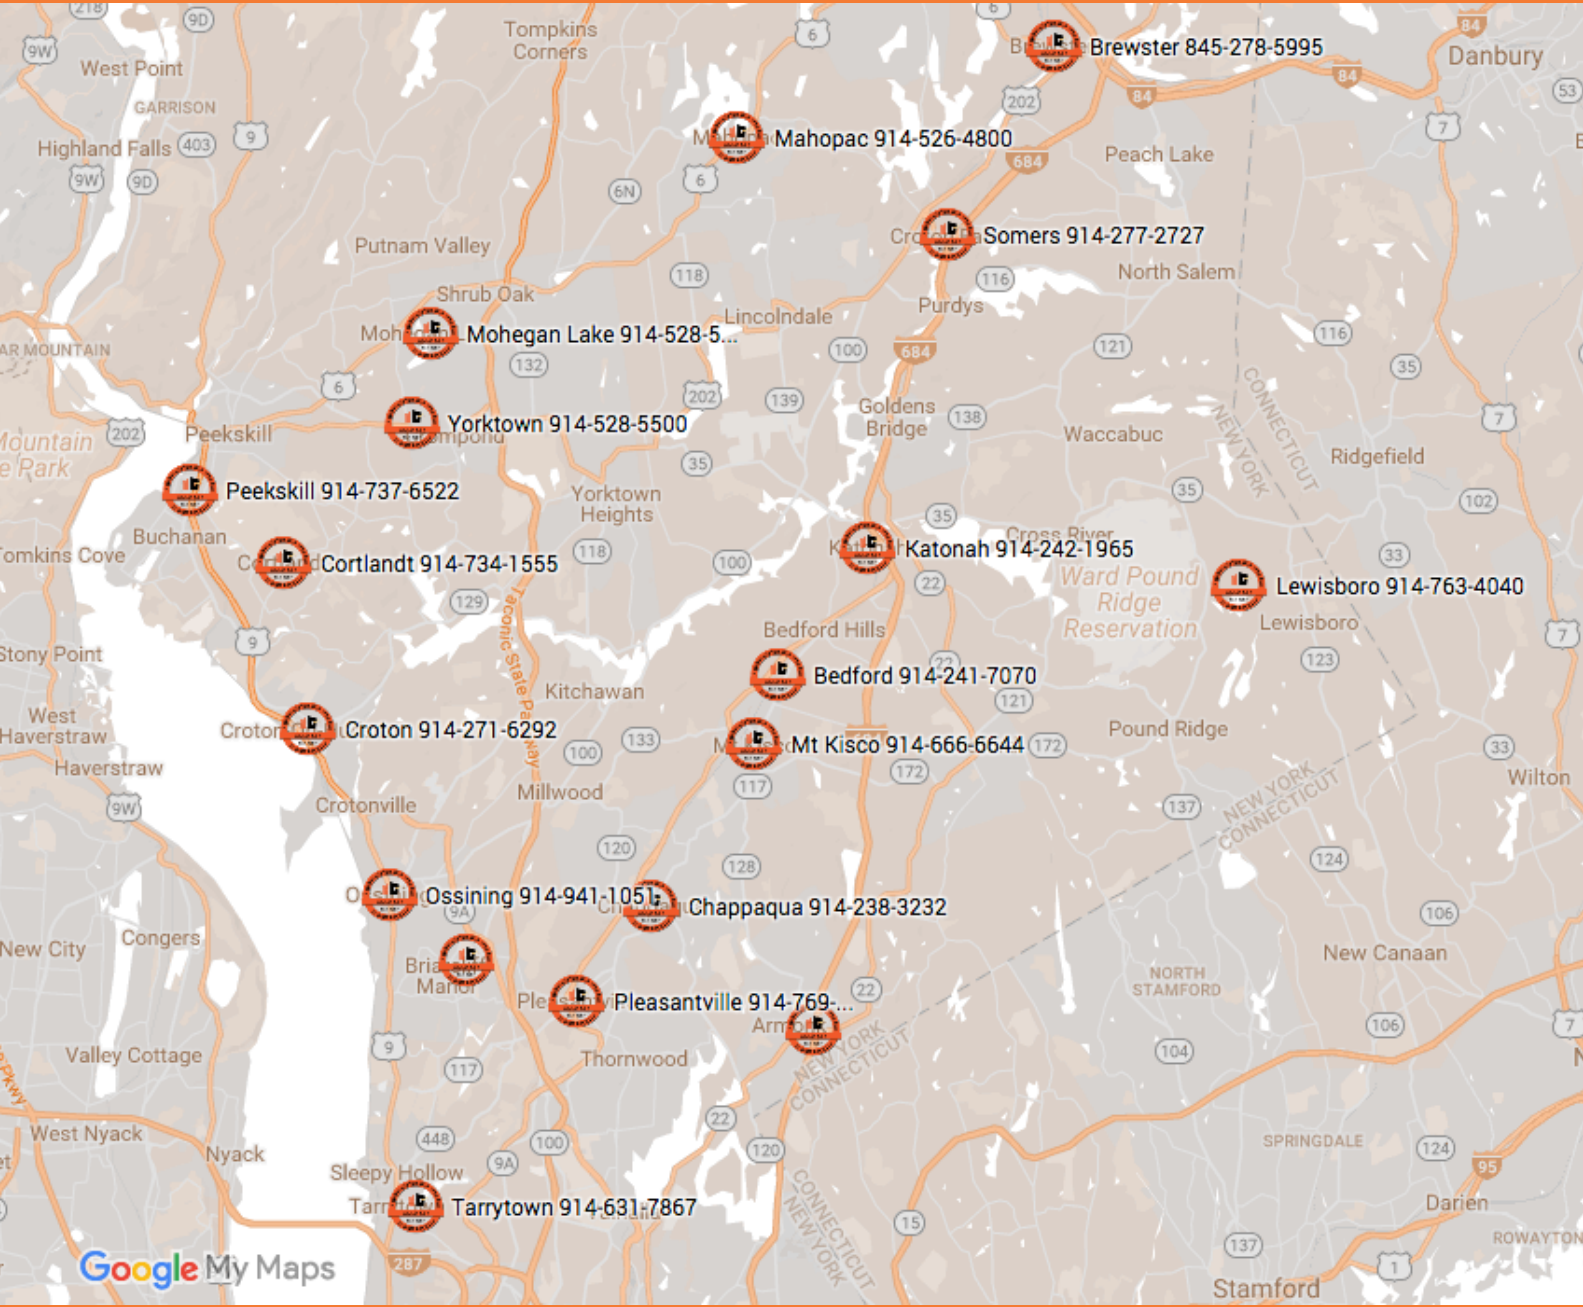

People typically use a climate controlled storage unit for their computers, electronics, antiques, wine, family heirlooms, paintings, photos, records , CDs, leather, clothing and books. A climate controlled unit helps negate the effect of extreme temperature on your belongings.
